

100 cable tray converted to a tee

AI Overview

A 100mm cable tray can be connected to a tee using an equal or medium-duty tee fitting, available in galvanised steel or stainless steel, with integral couplers for easy installation. Types of Tees for 100mm Cable Trays:

- Equal Tee:** Branches the tray into two equal 100mm sections, ideal for symmetrical layouts (Metsec CTET25/0100HDG).
- Medium Duty Flat Tee:** Designed for 100mm trays with integral coupling tabs and fishplates, eliminating the need for separate couplers.
- Stainless Steel Tee:** Suitable for light-duty applications where corrosion resistance is required, such as Legrand SST100S.

Material and Finish Options:

- Mild Steel Pre-Galvanised (PG):** Standard for most indoor installations.
- Hot-Dip Galvanised (HDG):** Provides extra corrosion protection, suitable for outdoor or humid environments.
- Stainless Steel 316L (SS):** High corrosion resistance for harsh environments.

Installation Considerations:

- Tees often come with integral couplers or fishplates, simplifying alignment and reducing installation time.
- Ensure the tee matches the tray width and depth (100mm in this case) for proper fit.
- Ventilated or solid covers can be added depending on cable protection requirements.
- For custom layouts, unequal tees or adjustable bends may be used to accommodate different branch widths.

Ordering and Part Numbers:

Example: Metsec part number CTET25/0100HDG indicates a 100mm equal tee in hot-dip galvanised finish. Part numbers typically encode depth, width, and finish, which helps ensure compatibility with your existing tray system. By selecting the appropriate tee type and material, a 100mm cable tray can be efficiently converted into a branching configuration while maintaining structural integrity and ease of installation.
