

Azerbaijan Armored Logging Fiber Optic Cable Factory

Overview

AITAF provides end-to-end optical communication solutions, structured cabling, ODN, optical modules, fiber testing instruments, data center networks, base station energy, smart city communications, and power telecommunication networks for European enterprises. Kazakhstan and Azerbaijan have officially launched the active phase of an ambitious project to lay the first-ever fibre-optic cable beneath the Caspian Sea—a major step toward transforming the region's digital infrastructure and strengthening connectivity between Asia and Europe. We are honored to be collaborating with AzerTelecom and Kazakhtelecom in delivering this unique. The Caspian Sea, long a symbol of regional cooperation, is set to become a digital bridge between the continents. For the first time, a subsea fiber-optic cable will link Azerbaijan and Kazakhstan, forming a digital artery with more than 400 terabits of capacity, poised to transform data routes. The project is being implemented by AzerTelecom, a backbone internet provider in Azerbaijan that operates within Azerconnect Group, which is part of NEQSOL Holding, in partnership with Kazakhtelecom, Kazakhstan's national telecommunications operator.
