

Cable sheathing distribution box

Overview

Designed for underground or outdoor distribution systems, the Cable Distribution Box offers a tamper-resistant and weatherproof solution for medium voltage control and protection. Improper cable management in electrical enclosures leads to moisture ingress and short circuits. Technicians must enforce strict compliance when routing branch circuits through a waterproof distribution box. Adding protective sleeves and bundling cables correctly ensures system longevity and. Our Raychem HVLB-SICO High Voltage Link Box provides a sealed and dry environment for the connecting links used for earthing or cross-bonding of the metallic sheaths of high voltage single core cables. After forming, the Aluminium Sheath is normally corrugated inline to improve flexibility of the cable. In some applications a smooth type sheath is preferred. RaySheath can be used either for cross-bonding or single-point bonding schemes and relies on the RaySVL, a Strikesorb-based Sheath Voltage Limiter. RaySVL features unique characteristics since.
