

Can a 10 Gigabit core switch be used directly without configuration

Overview

Unmanaged switches are best suited for a small network and come as single pieces of equipment that can be used immediately without the intention to configure. They are reasonably priced but neither support monitoring nor controlling traffic. A 10GB Ethernet switch could be the missing piece to perfect your connection, whether you're administrating a high-performance corporate network, refining a workflow that uses the cloud, or gaming at 4K. Technical Specifications of 10Gb/s Switch Speed:. Meeting the needs of scaling businesses, NETGEAR has launched its latest unmanaged switch – the GS108X, featuring 8 Gigabit Ports and 10G SFP+ port for non-blocking uplink over longer distances. ” Certain features warrant mention, such as: VLAN Support:. Is it possible to get 10 gb ethernet connection between my pc and NAS by giving each of them 10 gb cards?

And just directly connecting them?

Yep that will work fine. Just make sure to assign IPs in the same subnet to each interface.
