

Core Switch Replacement Project

Overview

This lab simulates a real-world enterprise network upgrade involving the replacement and configuration of core switches, port migration, ACL deployment, and rollback planning. I will be replacing a Cisco 3750x with a Nexus 3127 and would like some advice about how to go about the actual migration with the least downtime. So far I have two options. FutureBlox successfully executed the Network Switch Replacement and Implementation activity in the client's Datacenter, delivering enhanced network performance, minimized downtime, and ensured scalability for future growth. Upgrade network switches to state-of-the-art models. The Team Lead want's me to put together a Project Management document outlining everything that will be done, step-by-step. Adding in SFP+ modules will not give me. Replacing due to the age (sorry I was looking at the wrong switch) If you're swapping out the chassis then I would recommend doing it as follows: 1) Bring up the new core switch stack or chassis next to or above the current one.
