

Cuba rack-mount cold aisle type

Overview

A dual-row cold aisle system with transparent roof panels and end doors for controlled delivery of supply air to rack fronts. An aisle containment system is a simple way to improve cooling efficiency in hot aisle/cold aisle rack configurations. Essentially creating a room within the aisle, the system helps keep hot and cold air separated to make existing air conditioning systems in data center and edge-of-network. n is a best practice solution that separates hot and cold air streams. This method raises the temperature of the air returning to a Computer Room Air Conditioner (CRAC) unit, which allows the unit to operate more efficiently. However, without a physical barrier, you can still have wrap-around and. A rack-aligned hot aisle enclosure that connects the exhaust zone to an overhead return-air plenum for controlled heat removal.
