

Dimensions of Distribution Box No 8

AI Overview

Distribution Box No. 8 typically measures around 220–250 mm in height, 150–200 mm in width, and 80–120 mm in depth, depending on the manufacturer and model. Typical Physical Dimensions Most 8-port distribution boxes, such as the IDE CDN8PT IP65 series, are designed for compact installation while accommodating 8 modules or ports. The height usually ranges from 220 mm to 250 mm, the width from 150 mm to 200 mm, and the depth from 80 mm to 120 mm. These boxes are often made from ABS or polycarbonate, providing durability and UV protection for outdoor use. Mounting and Installation Distribution Box No. 8 can be wall-mounted or pole-mounted, depending on the model. They typically include pre-drilled mounting holes and may feature a transparent cover for easy inspection of internal connections. The boxes are designed to support M8, M12, or fiber optic connectors, with pre-wired or modular configurations for efficient cable management. Environmental Protection Many 8-port distribution boxes are rated IP65 or IP67, ensuring protection against dust and water ingress. This makes them suitable for industrial and outdoor environments, including automation, robotics, and fiber optic networks. Materials are often halogen-free and oil-resistant, providing additional safety and durability in harsh conditions. Summary While exact dimensions may vary slightly by manufacturer, Distribution Box No. 8 generally fits within 220–250 mm height, 150–200 mm width, and 80–120 mm depth, with robust environmental protection and flexible mounting options. For precise measurements, it is recommended to consult the specific product datasheet or manufacturer documentation.
