

End-of-life value of Huawei i2500 optical module

AI Overview

The Huawei i2500 optical module, now EOL, typically has a resale or refurbished market value significantly lower than its original price, often available through specialized resellers at deep discounts. **EOL Status and Implications** The Huawei i2500 optical module has reached End-of-Life (EOL), meaning Huawei no longer provides technical support, firmware updates, or spare parts for this product. While the module can remain operational, organizations must rely on third-party maintenance providers or refurbished units to continue using it. **Market Value**

Considerations **Refurbished or used modules:** Resellers like JEMSDATA and 1COM maintain inventories of Huawei EOL parts, including optical modules from the OptiX 2500 series, offering them at deep discounts compared to new units. **Pricing range:** While exact prices fluctuate based on condition, demand, and quantity, typical refurbished Huawei optical modules can range from 20% to 50% of the original retail price, depending on availability and urgency. **Lead times:** Many resellers can ship within 1-5 days, making them a practical option for maintaining legacy networks.

Alternatives and Support **Third-Party Maintenance (TPM):** Companies like Evernex provide ongoing support for Huawei EOL products, including access to spare parts, technical assistance, and lifecycle management, which can extend the operational life of the i2500 module.

Replacement planning: Given the EOL status, organizations often plan to migrate to newer optical modules or network equipment to ensure long-term reliability and security. **Summary** The end-of-life value of the Huawei i2500 optical module is primarily determined by the refurbished or secondary market, with prices significantly lower than the original cost. Organizations can either purchase these discounted units from specialized resellers or rely on third-party maintenance...
