

FPGA and PC Fiber Optic Communication

Overview

The main aim of this paper is to present an approach to establish optical fiber communication by employing the standard IEEE 802. Abstract— The transmission and reception of information such as the data from a sensor, data in form of images, text, voice and videos on Field Programmable Gate Arrays (FPGAs) over ethernet through a coaxial cable, involves attenuation and distortion of signals at certain speed. Since conventional FPGAs do. This thesis addresses the growing demand for faster and more reliable data transfer solutions in data-intensive applications, with a strong emphasis on scalability and flexibility. The implementation uses an Altera Stratix IV chip with integrated PCIe interface logic and high-speed input/output for connecting optical fiber interfaces. The. Gothenburg, Sweden 2017 The Author grants to Chalmers University of Technology and University of Gothenburg the non-exclusive right to publish the Work electronically and in a non-commercial purpose make it accessible on the Internet.

Article Content

Design and Simulation of Optical Fiber Communication Link by Ethernet ...

The optical fibers have greater bandwidth as it uses the electromagnetic spectrum. The data such as picture, voice, and text is sent through optical fiber cable from one end to the other end using FPGA.

Design and Simulation of Optical Fiber Communication

To achieve speedup for multi-node, multi-GPU computing platforms, it is necessary to overcome performance bottlenecks in networks based on Ethernet or Infiniband. This paper

Research On FPGA-based High-speed Data Optical Fiber Transmission

Abstract This article briefly introduces the principles and advantages of optical fiber transmission and the characteristics of the integrated IP core developed by Xilinx. Aiming at the

The Role of FPGA Technology in the Design of Smart Transceivers

the implementation in FPGA technology of a biLSTM based equalizer for non-linear effects in optical communications systems. This is a novel use of the biLSTM architecture for this application.

Research On FPGA-based High-speed Data Optical Fiber Transmission

Aiming at the advantages of optical fiber communication, Xilinx ZYNQ7000 series FPGA chips are used to design a high-speed data optical fiber transmission scheme based on FPGA.

Low Power FPGA Implementation of a Smart Building

This paper illustrates a prototype low-power FPGA-based wireless optical communication system for building-to-building communication utilizing the

The High-Speed Data Transmission System on Fiber Optic Cable

2 Clock Synchronization With the high-speed data transmission system on fiber optic cable for IoT equipment uses FPGA platform, clock synchronization is a prerequisite for functional cores to

Example of FPGA-based Aurora communication

This note provides an example of loopback communication using the Aurora 8B/10B protocol over a fiber optic link. It provides a step-by-step guide demonstrating how the Aurora 8B/10B

Real-time system based on FPGA for optical communication system

In this article, we review our recent research progresses on the field programmable gate array (FPGA)-based real-time generation and reception of orthogonal frequency-division multiplexing

Design Approach for a FPGA based Ethernet Bridge for Optical Fiber ...

The main aim of this paper is to present an approach to establish optical fiber communication by employing the standard IEEE 802.3 Ethernet and Optical Sensing circuits that can be implemented

Sample manuscript showing specifications and style

Real-time system based on FPGA for optical communication system Ming Chen^a, Rui Deng^b, Qinghui Chen^b, Jing Heb and Lin Chen^b ^aCollege of Physics and Information Science, Hunan Normal Univ ...

The Application of FPGA in Optical Fiber Sensing and Communication ...

Abstract To obtain pulsed light signal used as pulsed pump light for optical fiber sensing and communication systems, a design scheme of generating pulsed light based on continuous laser and

Design and Simulation of Optical Fiber Communication

Request PDF | On May 21, 2021, Anil Raju Wadeyar and others published Design and Simulation of Optical Fiber Communication Link by Ethernet Protocol using FPGA | Find, read and cite all the ...

Design Approach for a FPGA based Ethernet Bridge for

Since conventional FPGAs do not have an optical fiber interface port, an external optical interface circuits are needed to establish fiber optic communication links

FPGA-Based Demonstrator for Real-Time Evaluation of a Fiber-Optic ...

The overarching goal of this thesis is to develop and evaluate an HDL implementation of an FPGA system, both logic and peripherals, that acts as physical layer in a fiber-optical communication system.

Design Approach for a FPGA based Ethernet Bridge for Optical Fiber ...

Block Diagram of FPGA Based Ethernet Bridge for Optical Fiber Communication. In architecture shown in Figure 1, two FPGAs with ethernet transceivers are connected to a fiber media

Design Approach for a FPGA based Ethernet Bridge for

PDF | On Jun 1, 2020, Murthy S and others published Design Approach for a FPGA based Ethernet Bridge for Optical Fiber Communication System | Find, read and

PCIe Over Fiber Optics in FPGA-Based Systems

Abstract This thesis addresses the growing demand for faster and more reliable data transfer solutions in data-intensive applications, with a strong emphasis on scalability and flexibility. The research

Design Approach for a FPGA based Ethernet Bridge for

The implementation uses an Altera Stratix IV chip with integrated PCIe interface logic and high-speed input/output for connecting optical fiber interfaces.

Semiconductor & System Solutions | Infineon Technologies

FPGA in wired and wireless telecommunications applications Power system reliability modeling RF front end components for telecommunications infrastructure Memory solutions for cellular base stations

Design and Implementation of an FPGA-Based 10G

The paper provides a detailed explanation of the hardware design and firmware programming for the 10G optical fiber interface reflective memory

WORLD WIDE WEB JOURNAL Home

Internet communications tools Document preparation Computing industry Computing standards, RFCs and guidelines Computer crime Language types Security and privacy Computational complexity and

The FPGA Turns to Optical Interconnects

The optical communication is powered by two of Ayar's SuperNova light source modules, supporting 64 optical channels of high-speed, error-free communication across 8 fibers on each chiplet.

PCIe Over Fiber Optics in FPGA-Based Systems

The main objective is to explore how PCIe technology can be effectively extended over long distances using fiber optics, while maintaining high throughput and low latency, essential for supporting the

Design and Implementation of an FPGA-Based 10G Optical Fiber

The 10G fiber optic interface is realized by using FPGA and SFP+ optical module. The SFP+ optical module completes the functions related to photoelectric conversion, while the GTX of

An FPGA implementation for a high-speed optical link with a PCIe

This paper describes the system architecture and logic implementation details for a high-speed optical communication link employing a custom protocol.

DESIGN OF DATA TRANSMISSION SYSTEM BASED ON ETHERNET AND FIBER OPTIC ...

This paper presents the design of FPGA based developmental board for real time data transmission using Ethernet and fiber optic link. With respect to the requirements, a hardware system with FPGA
