

Fiber optic main distribution frame open cabinet

Overview

Optical distribution frames include floor-standing and wall-mounted cabinets that contain 3U shelves with patch adapters and splice trays. ODF cabinets are used for as an ultra high density central cross-connect point in exchange, head end and customer premises distribution. Network managers need a better solution, one that supports rapid deployment, plug-and-play connectivity and high density—all while maximizing the usable density and long-term value of the fiber network. With a compact, modular frame, high-density plug-and-play elements, and full-frontal access, the. An Optical Distribution Frame (ODF) is the central hub for fiber splicing, termination, patching, and cable protection in modern optical networks. FDF-FL series floor standing cabinets are fiber management systems that are designed to be used in an exchange, head end or customer. The Corning® Optical Distribution Frame is optimized for high-density cross-connect applications. Pre-terminated ODFs with cables are pre-installed with connectors and cable for quick and easy installation.
