

Grounding length of primary distribution box

Overview

26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. Grounding is a mechanism to protect distribution equipment and people under normal operating conditions, abnormal operational (overcurrent and overvoltage) responses, and hazardous conditions such as shocks. Equipment Protection: Grounding protects substation. IPMENT, STRUCTURES, ETC. IN ELECTRICAL STATIONS INCLUDING TRANSMISSION AND DISTRIBUTION SUBSTAT GR THAN 8 FT FROM THE FENCE. THE FENCE SHALL BE GROUNDED SEPARATELY FROM THE GRID UNLESS OTHERWISE NOTED ON THE A PROPRIATE PROJECT DRAWING. Each DISTRIBUTION BOX and controller must be grounded. The primary enclosures shown in this document are the preferred enclosures. This Technical specification is witching stations at sites other than those at Grid Supply Points and national and international standards, as well as statutory legislation and licence conditions.
