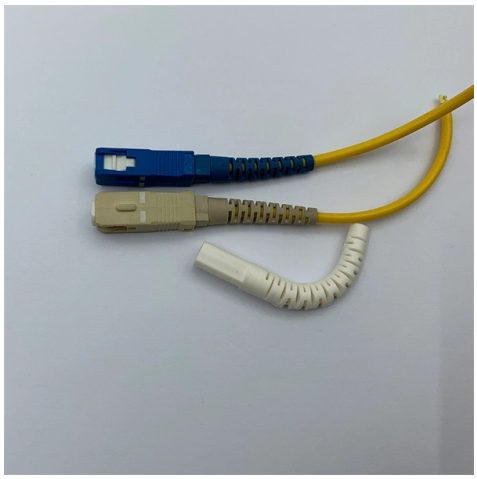
Grounding wire for charging pile in distribution box



Overview

26 mm 2 (10 AWG) ground wire must be used, and in all other markets a 6 mm 2 must be used. Grounding wires should minimize loops and bends, avoiding isolated, suspended grounding components to reduce local potential differences. After the 33 kv lightning arrester is connected to the grounding conductor of the charging pile structure in the common network, it forms a multi-point grounding. Equipment Protection: Grounding protects substation equipment from potential damage from lightning strikes, fault currents, and transient overvoltages. System Stability: A.
