

High-density PDU power distribution unit waterproof type in stock

AI Overview

High-density PDUs provide robust power distribution for data centers and high-demand environments, with some models offering waterproof or ruggedized options for harsh conditions.

Overview of High-Density PDUs High-density PDUs are designed to maximize outlet capacity in limited rack space, supporting high-power IT equipment, AI workloads, and HPC systems. They typically feature:

- Multiple outlet types (C13, C15, C19, C21, and NEMA options) to accommodate diverse equipment.
- Intelligent monitoring for voltage, current, and power usage, often with remote management and automated alerts.
- High power capacity, with some units delivering up to 57.6 kW per PDU, suitable for AI and HPC environments.
- Flexible mounting options, including horizontal 19-inch racks or vertical configurations.
- Configurable modules allowing up to 54 outlets per PDU, with adjustable cord entry positions and lengths for seamless installation.

Waterproof and Ruggedized Options While standard high-density PDUs are designed for indoor data center use, waterproof or IP-rated PDUs are available from specialized manufacturers for environments exposed to moisture or dust. These units typically feature:

- Sealed enclosures to prevent water ingress.
- Corrosion-resistant materials for industrial or outdoor applications.
- Enhanced safety certifications for wet or humid conditions.

To ensure waterproof capabilities, look for PDUs with IP65 or higher ratings, which indicate protection against water jets and dust.
