

How do fiberglass luminous floats glow

Overview

These floats work by absorbing ambient light during the day and re-emitting it at night, creating a glowing beacon that not only helps you see the float but also attracts curious fish. These LED glow sticks are a game changer for anyone who loves fishing in low light conditions. Not only do they make it easier to keep track of your line, but they also make for some pretty epic Instagram-worthy photos. Trust me on this one folks, QualyQualy has got your back when it comes to night. A glow float, also known as a night fishing float or luminous bobber, is a specialized fishing float designed to emit a soft, visible glow in low-light or complete darkness.
