

How to find the MAC address on the aggregation switch

Overview

We can find the mac address of the devices connected to the switch by using following methods. (from what I know you can check that by Switch#sh mac-address-table command) I mean say you are on switch1 what command do you use to check swith1's mac address?

2) Does each switchport interface have a separate mac addresses for each. Lists the MAC addresses of the devices the switch has detected, along with the number of the specific port on which each MAC address was detected. Lists the port on which the switch detects the specified MAC. The MUCH easier way to do this is via LLDP - this will show you each interface that is part of the LACP bundle and which port it attaches to on the remote switch. It helps the switch forward frames only to the correct destination port, increasing efficiency. For more information about configuring static multicast MAC address entries, see IGMP snooping and IPv6 multicast routing and forwarding in IP. Summary: Manage Dell Networking X Series switches via WebGUI or CLI to view MAC address tables, including dynamic, interface specific, and VLAN based addresses.
