

How to lead wires out of the cable tray

AI Overview

Wires should be led out of cable trays using proper fittings, maintaining bend radius, separation, and protection to ensure safety, compliance, and organized routing. Use Appropriate Cable Tray Fittings When exiting a cable tray, use exit fittings such as elbows, tees, or drop-outs designed for the tray type. These fittings guide cables smoothly from the tray to conduits, junction boxes, or equipment, preventing sharp bends and mechanical stress on the conductors. Ladder trays, perforated trays, and wire mesh trays each have compatible exit accessories to maintain cable integrity. Maintain Proper Bend Radius Cables must not be bent beyond their minimum bend radius when leaving the tray. Exceeding the bend radius can damage insulation and reduce cable lifespan. Typically, the bend radius is at least 6-10 times the cable diameter for power cables, but always check manufacturer specifications. Segregation and Separation Ensure high-power and low-power cables are separated to prevent electromagnetic interference (EMI). When leading cables out of the tray, maintain the same separation rules as inside the tray. Use dividers or separate conduits if necessary. Protection Against Mechanical Damage Install cable guards, bushings, or grommets at tray exits to protect cables from sharp edges. This prevents abrasion and insulation damage, especially when cables pass through metal trays or walls. Grounding and Bonding For metallic trays, ensure proper grounding and bonding. Metallic trays can serve as equipment grounding conductors if they meet NEC requirements. When cables exit the tray, maintain continuity of grounding to avoid electrical hazards. Labeling and Documentation Label cables at exit points for easy identification and maintenance. Document the routing and exit points to comply with safety standards and facilitate future troubleshooting. Compliance with Standards Follow NEC Article 392, IEC 61537, and local building codes for cable tray installation and cable exits. Ensure that exit points are accessible, maintain require...
