

How to read the serial number data of a beam splitter

AI Overview

The serial number of a beam splitter is usually located on a label or sticker on the steel frame near the engine or hydraulic tank, often under the main beam. Typical Locations Under the beam on the hydraulic tank: Many splitters have a sticker or metal plate at the hinge point where the beam pivots between horizontal and vertical positions. This is a common location for DHT and Champion splitters. Near the engine or hydraulic tank: Look for a white label with black text that includes both the model and serial numbers. On Champion 27-ton splitters, the model number often starts with "100" or "200" followed by four digits (e.g., 100424), and the serial number is printed nearby. Pivot bracket or beam pivot area: Some units place a barcode sticker on the pivot bracket between the pivot pin and the towing reflector, with the serial number printed in small font. Tips if the Label is Missing or Damaged Check purchase documentation: Manuals, receipts, or online order history from retailers like Home Depot, Lowe's, or Tractor Supply may list the model and serial numbers. Contact manufacturer support: If the label is unreadable, the manufacturer can often help identify the serial number using the model number and other product details. Compare with diagrams: Using the owner's manual or parts diagram can help confirm the correct location of the serial number label. By carefully inspecting these areas and using supporting documentation, you can reliably locate the serial number for your beam splitter, which is essential for ordering parts, warranty claims, or technical support.
