

Maintenance of Fiber Optic Cable Route Detector

Overview

Monthly Maintenance: Randomly inspect fiber optic cable connections, test backbone fiber optic link attenuation, and clean connector end faces. **Quarterly/Semi-annual Maintenance:** Perform OTDR testing on fiber optic lines, verify system alarm records, and update. Some people have suggested that fiber optic networks need periodic maintenance, including microscopic inspection of connectors and mating adapters and even insertion loss testing or taking OTDR traces. It could hurt an installer or get them sued by an irate network owner. Recommendation ITU-T L. Through a tiered. **Description:** Fiber optic microscopes are used to examine the cleanliness and smoothness of fiber ends. Regular. Building on our 35 years of innovation, EXFO's unique blend of equipment, software and services enable faster, more confident transformations related to 5G, cloud-native and fiber optic networks. Optical fiber networks are everywhere and are continuously evolving, under heightened stress. The scope of work includes, that patrollers team will patrol the total length of OFC routes on daily basis and keep close watch on the cable routes to prevent OFC damage.
