

Multimode fiber optic network card identifier

Overview

The OFI-BIPM optical fiber identifier is an easy to use tool that determines if a fiber is live, the transmission direction, and the relative core power on standard and bend-insensitive single-mode and multimode fibers. Whether you're upgrading a workstation, scaling a small business network, or building out a hyperscale data center, a fiber network card (NIC, network interface card) is one of the most critical components for connectivity. Its positive-stop trigger mechanism provides the right pressure every time to. Mini OTDR Fiber Optic Tester/Optical Domain Reflectometer for Multimode 850nm, 22dB/20dB, Up to 5km.
