

## Outdoor distribution box for residential surface mounting

### AI Overview

IP65-rated surface-mounted distribution boxes are ideal for outdoor residential installations, offering dustproof, water-resistant, and UV-stable protection for circuit breakers and electrical connections.

**Key Features**

**Protection and Durability:** Outdoor distribution boxes for residential use typically have an IP65 rating, making them dust-tight and resistant to water jets, ensuring safe operation in rain, humidity, or dusty environments. They are made from UV-stable, weather-resistant materials such as ASA (Acrylic Styrene Acrylonitrile) or flame-retardant ABS, which maintain structural integrity under temperatures from  $-25^{\circ}\text{C}$  to  $+60^{\circ}\text{C}$ . Transparent polycarbonate doors allow easy inspection without opening the box and are often lockable for safety.

**Compatibility and Capacity:** These boxes are designed to accommodate standard DIN rail modules, including miniature circuit breakers (MCBs), RCDs, and surge protection devices. Module sizes are measured in TE (17.5 mm per unit), and boxes are available in various sizes, from small 4–12 TE units to larger multi-row configurations. Some models offer pre-installed N/PE terminals and pre-made cable entries for quick installation.

**Installation and Accessories:** Surface-mounted boxes are easy to install on walls or other flat surfaces. They often include mounting hardware, sealing plugs, and instructions, and optional accessories like double-row terminal strips or screwless terminals can simplify wiring. Transparent or opaque doors, as well as different colors, allow customization for visibility and aesthetics.

**Applications:** These distribution boxes are suitable for residential outdoor areas, including gardens, garages, balconies, and photovoltaic systems. They protect electrical components from environmental factors while providing a safe and organized distribution point.

**Recommendations** Choose a box with IP65 or higher for...
