

Price of circuits for distribution box installation projects

AI Overview

The cost of installing circuits in a distribution box typically ranges from \$300 to \$800 per new breaker, with total project costs influenced by panel type, amperage, labor, and materials.

Distribution Box and Breaker Costs The price of a distribution or breaker box depends on amperage, number of circuits, and features. Standard residential panels range from \$1,400 for a simple 100-amp panel to over \$9,000 for full-service upgrades including higher amperage and smart-capable breakers. Commercial or industrial boxes are more expensive due to higher capacity and durability requirements.

Circuit Installation Costs Adding a new circuit to an existing panel generally includes the breaker, wiring, and labor. Typical costs are:

- New breaker installation: \$300–\$800 per circuit
- Electrical receptacles or outlets: \$100–\$300 each, depending on type and complexity
- Labor rates: \$85–\$125 per hour for standard residential work, with adjustments for accessibility or wall type

For multi-gang or feed-through boxes with surge protection, costs can increase 20–40% above base prices. Projects in challenging locations, such as concrete walls or limited access, may add 15–30% to labor and materials.

Factors Affecting Total Project Cost

- Panel type and amperage:** Higher amperage panels and advanced features like AFCI/GFCI or smart monitoring increase both material and labor costs.
- Number of circuits:** More circuits require additional breakers, wiring, and labor.
- Labor complexity:** Difficult access, long wiring runs, or upgrades to service size increase costs.
- Permits and code compliance:** Local regulations may require inspections or permits, adding to the total budget.
- Material quality and customization:** Weather-resistant or specialized panels, custom labeling, and integration with building management systems can raise costs.
