

Price of sealing holes in distribution boxes

AI Overview

Sealing holes in distribution boxes typically costs between \$5 and \$20 per seal, depending on the type and size of the product used. Options for Sealing Distribution Boxes

- 1. Polylok D-Box Seals** Polylok offers watertight seals for distribution boxes that fit multiple pipe sizes (2", 3", 4", and 6"). These seals are designed to create a secure, removable, and watertight connection between the pipe and the box. The price for a single Polylok 3001-SEAL is generally around \$5-\$10 per seal, depending on the supplier and shipping. Installation involves cutting or tearing the seal to fit the pipe and securing it with a nut.
- 2. Non-Setting Putty (Pack & Seal)** For electrical distribution boxes, Pack & Seal putty sticks are a flexible, non-setting option that can seal gaps and holes while remaining removable for future maintenance. A 100g stick costs approximately \$10-\$15, and one stick can seal multiple small holes or gaps. This solution is ideal for temporary or adjustable sealing where future access is required.
- 3. Polyurethane or Silicone Foams** For more permanent sealing, polyurethane or silicone foams can be used in electrical enclosures and distribution boxes to protect against moisture and dust. Prices vary widely depending on the brand, volume, and application method, typically ranging from \$15 to \$30 per application for small to medium-sized boxes. These foams often require specialized application equipment for optimal results.

Factors Affecting Cost

- Number and size of holes:** Larger or multiple holes require more material or multiple seals.
- Type of seal:** Removable putty is generally cheaper than watertight D-box seals or foams.
- Supplier and shipping:** Prices can vary depending on the vendor and location.
- Installation method:** Some products require tools or professional installation, which can add to the cost.

In summary, for most standard distribution boxes, expect to pay \$5-\$20 p...
