

Rainproof main distribution box

AI Overview

A rainproof distribution box is an outdoor electrical enclosure designed to protect wiring and components from rain, dust, and environmental exposure, typically rated IP65 or higher.

Key Features

- Ingress Protection (IP) Rating:** Rainproof distribution boxes usually have IP65 to IP68 ratings, which ensure protection against water jets, heavy rain, and dust ingress, making them suitable for outdoor installations like gardens, rooftops, and solar systems.
- Materials:** Common materials include ABS plastic, polycarbonate, or stainless steel, which are UV-stabilized to resist sunlight, corrosion, and cracking. These materials provide durability while remaining lightweight for easy installation.
- Sealing and Gaskets:** High-quality polyurethane or rubber gaskets are used around the lid and cable entry points to maintain a continuous barrier against water and dust. Latches are often stainless steel to maintain uniform pressure and prevent distortion over time.
- Internal Structure:** Rainproof boxes often include DIN rails, mounting plates, and molded pillars to secure circuit breakers, terminal blocks, and other components while isolating them from condensation.
- Thermal and Environmental Resistance:** Many enclosures operate in a wide temperature range (-25°C to $+85^{\circ}\text{C}$) and are suitable for harsh climates, including deserts, coastal areas, and cold regions.
- Installation Considerations**
 - Mounting:** Use expansion bolts with rubber sealing washers to secure the box to a stable surface.
 - Cable Entry:** Pre-molded knockout holes or liquid-tight cable glands ensure secure and waterproof conduit connections.
 - Clearance:** Maintain internal spacing (e.g., 15mm) for heat dissipation and safe component operation.
 - Maintenance:** Regularly inspect seals, gaskets, and cable entries to ensure long-term rainproof performance.
- Applications** Rainproof distribution boxes are ideal for outdoor lighting, pumps, security systems, solar panels, and garden equipment. They prevent short circuits, electrical fires, and equipment damage caused by rain, dust, or flood...
