

Round-head FC interface

Overview

Normally used to connect two fiber optic cables with standard FC (male) connectors. Mounting- Free standing or bulkhead (3/8" hole or single-D hole). The FC connector is a fiber-optic connector with a threaded body, which was designed for use in high-vibration environments. FC connectors are used in datacom, telecommunications, measurement. Fibertronics offers a variety of FC fiber optic adapters. These are bulkhead adapters that mount into patch panels and adapter plates, and are available in square, round and oval mount configurations with a choice of zirconia straight, or phosphor bronze straight. SENKO offers FC Adapters in Round mount configuration with high precision zirconia split sleeves. What temperatures can the FC adapter be used in?

The FC adapter can be used in temperatures as low as -40°C and up to 75°C. They are small, often overlooked components, yet they are essential for ensuring high-speed, low-loss, and reliable optical transmission.
