

Router fiber optic and wireless indicator lights

AI Overview

The LED lights on a wireless fiber optic router indicate power, internet connectivity, LAN activity, and Wi-Fi status, with colors and blinking patterns showing normal operation or potential issues.

Common LED Indicators and Their Meanings

- Power Light**
Solid: Router is powered on and functioning normally.
Off: Router is not receiving power; check the power cable, adapter, and electrical outlet.
Flashing: Router is booting up or restarting.
- PON (Passive Optical Network) Light**
Solid: Normal optical signal from the ISP.
Blinking: Abnormal signal levels; may indicate weak or unstable fiber signal. Preferred optical signal is between -20 dBm and -27 dBm.
- LOS (Loss of Signal) Light**
Off: No signal loss; fiber connection is intact.
Red or Blinking Red: Physical fiber disconnection, dirty connector, broken patch cord, or no signal from the ISP.
- LAN (Ethernet Ports) Lights**
Flickering: Device connected and actively transmitting data.
Off: No device connected or faulty LAN port/cable.
- WLAN / Wi-Fi Light**
Flickering: Wireless activity is occurring; devices are connected and transmitting data.
Off: Wi-Fi is disabled in router settings or turned off via a physical button.

Understanding Colors and Blinking Patterns

- Green/Blue:** Normal operation; solid indicates stable connection, blinking indicates data transfer.
- Red/Amber:** Indicates a problem, such as hardware fault, power issue, or no internet connection.
- Yellow/Amber:** Transitional state, such as booting, updating firmware, or minor connection issues.
- Slow, steady blinking:** Device is attempting to establish a connection; prolonged blinking may indicate a problem.
- Rapid blinking:** Normal data transmission over Wi-Fi or Ethernet.

Troubleshooting Tips

- If all lights are off, ensure the router is powered and the outlet is functional.
- If only the power light is on, the router may be faulty.
- If all lights appear normal but there's no internet, the issue ma...
