

Special connector for distribution boxes

Overview

Heavy duty cable connectors are robust modular interfaces designed to transmit power, data, and signals through a single housing. When used at the main cable entry of a distribution box, they replace traditional cable glands or hard-wired connections. This transition to a plug-and-play architecture. Our flexible distribution boxes enable reliable, decentralized signal transmission and power transmission up to protection class IP67 – wherever passive distribution boxes are required. The preassembled power distributor allows easy and time-saving installation with PRC 20 series. Behind every reliable distribution board is a connector system doing quiet, dangerous work. This article breaks down the real connector types used inside E-abel electrical enclosures, explains where heavy-duty connectors, industrial plugs, and cable glands belong, and shows how the right wiring. Wiring diagram shows both PNP and NPN wiring. Actual units use PNP status indicator, NPN status indicator, or neither. Dimensions are shown in mm (in).
