

The electrical cable tray support is galvanized

Overview

Hot Dip Galvanized (GI) Perforated Cable Trays are metal trays coated with a layer of zinc through the hot-dip galvanizing process. GI cable trays are designed to support and organize electrical cables and wiring systems, ensuring a neat and secure installation. The material of a cable support system is normally steel or stainless steel. Various galvanisation surfaces can be applied to improve corrosion protection. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to similar or. , ABB offers steel cable tray with pre-galvanized and hot-dip galvanize lvanization is an economical and effective way to protect steel ag tal, naturally oxidizes when exposed to air, but at a much slower rate than steel. Our cable trays are produced in fit for purpose materials like stainless steel, galvanized, aluminium and fibreglass (FRP/GRP) composites to suit any project type both offshore and onshore. Each system is designed to ensure strength, corrosion resistance, and long-term performance in the most demanding. For industrial and commercial installations, galvanized cable tray systems offer unbeatable durability, corrosion resistance, and long-term cost-effectiveness compared to many other options.
