

The primary distribution box needs to be grounded

Overview

28 (Box Materials): Metal boxes (like your cabinet) must be reliably grounded and bonded, period. 26 (Clearance Requirements): Ensures workers can safely access equipment doors without obstructions—no cramming wires around hinges! NEC 314. Three-wire with ungrounded neutral system (neutral is grounded only at the substation and the distribution. Power from factory ground must be installed by a qualified electrician. Grounding of the units: Attach a ground wire from one of. Safety of Personnel: By safely channeling fault currents into the ground, proper grounding helps to reduce the risk of electric shock to personnel. This helps to reduce the potential difference that exists between conductive parts and the earth. Then your supervisor walks by and points at the ungrounded door— "Add a wire to that!" Ugh. IN ELECTRICAL STATIONS INCLUDING TRANSMISSION AND DISTRIBUTION SUBSTAT GR THAN 8 FT FROM THE FENCE. THE FENCE SHALL BE GROUNDED SEPARATELY FROM THE GRID UNLESS OTHERWISE NOTED ON THE A PROPRIATE PROJECT DRAWING.
