

US Exported Energy-Saving Communication Power Supply Cabinet CIF Price

AI Overview

CIF prices for U.S.-exported energy-saving communication power supply cabinets vary by supplier, HS code classification, and destination port, typically requiring direct trade data or supplier quotes for precise figures. Trade Classification and HS Codes Energy-saving communication power supply cabinets are generally classified under energy storage or electrical equipment HS codes, often linked to battery or power distribution systems. Correct HS code classification is crucial for determining tariffs, compliance, and CIF pricing. For 2026, cabinets may fall under codes related to energy storage cabinets with integrated inverters and battery management systems, with certifications like UL 1741, UL 9540, IEC 62619, or CE affecting export eligibility and cost.

CIF Pricing Considerations CIF (Cost, Insurance, and Freight) includes the product cost, insurance, and shipping to the destination port. Factors influencing CIF prices for these cabinets include:

- Cabinet specifications:** Voltage rating, thermal management (air vs. liquid cooling), and integrated electronics.
- Battery chemistry:** LiFePO₄ cabinets are common for safety and cycle life.
- Destination port and shipping route:** Longer distances and higher-risk regions increase freight and insurance costs.
- Regulatory compliance:** Regional certifications and local content rules can affect landed cost.

Trade Data Sources To estimate CIF prices, exporters and importers can consult:

- U.S. Energy Trade Dashboard:** Provides HS-10 level export data for energy equipment and battery supply chains, including historical export values and volumes.
- Trade Map:** Offers monthly and yearly export statistics, market shares, and alternative markets for U.S. energy equipment.
- UN Co...**
