

Uganda 40km optical module

Overview

The LS-SM3101-40I SFP transceivers are high performance, cost effective modules supporting data rate of 125Mbps/155Mbps and 40km transmission distance with SMF. The transceiver consists of three sections: a FP laser transmitter, a PIN photodiode integrated with a trans-impedance preamplifier (TIA) and MCU control. In modern optical transport networks, 100G optical modules with a transmission distance of 40km have emerged as a core technology to meet the needs of carriers' backbone networks, large enterprises, and cloud service providers. Depending on different application scenarios and technical. An Optical transceiver module is the core part of optical communication devices. Hot Pluggable QSFP28 form factor. The module converts 4 inputs channels (ch) of 10Gb/s electrical data to 4 CWDM optical signals, and multiplexes them into a single channel for 40Gb/s optical transmission.
